

DEHORS

Design by
Metrica

Description

THE CONCEPT : thanks to its reinforced structure, the Dehors table has great visual lightness despite its generous solid ceramic top. Its four legs, discreetly positioned in the corners, confer elegance and finesse whilst optimising the available space for guests - space which is optimised still further by the quarter-turn rotation of each leg, which creates a pleasant yet dynamic asymmetry. Guests will benefit from a comfortable table width of 100cm which is particularly generous for a table destined for outdoor use.

QUALITY OF MANUFACTURE: indoor/outdoor dining table with structure composed of a white lacquered stainless steel base reinforced by nickel plate-effect anodised aluminium crosspieces. Top (which covers the entirety of the frame) in scratch, stain and thermal shock-resistant ceramic stoneware.
